

BalanceBox® DVLED Mobile Mounting Solutions

Height adjustable mounts for DVLED panels

Large DVLED Panels are gaining popularity fast, thanks to their stunning visual impact. Bringing the impact of these products to different rooms is difficult when they are wall-mounted.

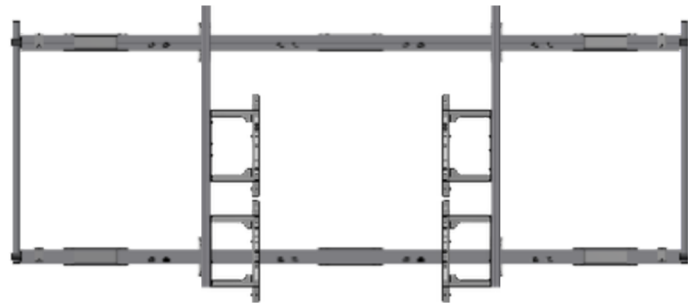

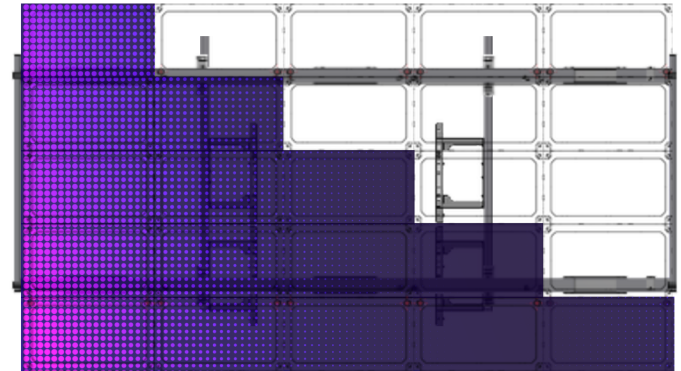

The BalanceBox® DVLED Mounting solutions now brings mobility and height adjustment to indoor DVLED panels up to approximately 136 inches. Simple move the panel to the low position so it will pass through any standard doorway to the next room.

With the height adjustable BalanceBox® mounting system simply move the panel up again so everyone can see all of the screen and maximize the impact of your presentation. The BalanceBox® does not require electricity to function and is the fastest and safest height adjustable mounting system on the market.

The BalanceBox® system is ideal for interactive touch functionality on large panels, touch all of the panel in a fraction of a second! Simply grab the handle bars and move the panel. The BalanceBox® system can be mounted on the Mobile stand or on the wall and is fully certified and tested for safety.

The system is compatible with a large number of 5x5 cabinet arrays and All in One panels of different brands thanks to the versatility and adjustable height and width of the frame.

Collaboration in Motion.
Built for flexibility. Engineered for confidence.

Engineered for large-format DVLED installations
Mobile solution for indoor DVLED displays up to 136", including 5x5 arrays and All-in-One LED

High load capacity for demanding projects
